

Summary

As a Full Stack JavaScript/PHP developer, I'm like a wizard with a wand - I use React and React Native to conjure up beautiful and engaging user interfaces, and Laravel, Node.js, and Express to brew up fast and scalable server-side applications. But my magic doesn't end there. I also use TypeScript and Python, which are powerful programming languages that help me create robust and scalable applications. And when it comes to building APIs, I'm particularly passionate about GraphQL as it allows me to create APIs that are highly efficient, flexible, and powerful, like a spell that grants wishes in an instant. With 4 years of programming experience and 3 years of working experience as a contract Software Engineer, I've worked on everything from complex enterprise-level applications to mobile apps and web applications. And I'm not just a skilled craftsman - I'm also an enthusiastic learner, always seeking out new development trends and ideas. It's like I'm a curious explorer, venturing out into the unknown to discover new worlds of tech and bring back new insights and tools to my clients.

In every project, I aim for excellence, delivering high-quality code that is well-structured, maintainable, and scalable - like a potion that works wonders for your business. So if you're looking for a developer who can work magic with code, look no further!

Employment History

Software Engineer Stat Solutins • Full Time, FEB 2019-2020
